

Plants:

- are living things that grow and change
- are used to make materials and medicines
- create the oxygen we breathe
- can be found in homes, parks, and gardens.
- include weeds, moss, ferns, grass, shrubs, flowers, and trees.

Garden plants are plants that people choose to grow in their gardens. People may choose plants that:

- grow easily
- smell pleasant
- look beautiful
- attract insects.

Wild plants grow from seeds that fall from the plant. A wild plant doesn't need to be looked after as it grows.

| Word | Definition |
